4D Modelling Service

The future of dispute resolution is available today from S J Davey Consultants.

- We offering a fully integrated forensic 4D and 5D modelling service.
- Whilst 4D technology is currently depicted as a Project Management tool within Building Information Modelling packages; it also has the potential to be used to de-construct a project to pictorially detail the cause and effect of delay and disruption.
- S J Davey Consultants can provide the highest level of delay analysis with renowned international experts, and has access to one of the UK's leading exponents of Building Information Modelling to provide a unique 4D product for those looking for an edge in case presentation.
- Sounds expensive? Whilst providing a unique and high grade service, the 3D animations are actually developed on a fixed price basis.
- The following link <http://www.youtube.com/watch?v=06r5X5DLVkl> provides an idea of the type of animation available. Software is more powerful than depicted as clash technology allows detailed reports to be produced on the failures of the design, which is particularly useful on processing plants.

- In a 4D depiction, programming or scheduling software showing critical delay can be linked to the 3D animation which would enable a fly through of the building interior to an animation of the cause of delay. In this case a picture really is worth a 1000 words.

4D Modelling

- Estimating or cost information can be linked to animations to give a 5D perspective.

For further information on services we can provide please visit our website linked above or contact Stuart Davey.
